

Do not run the bot on one PC at  
PokerStars!

Do not store the robot files on the  
computer where PokerStars is  
located!

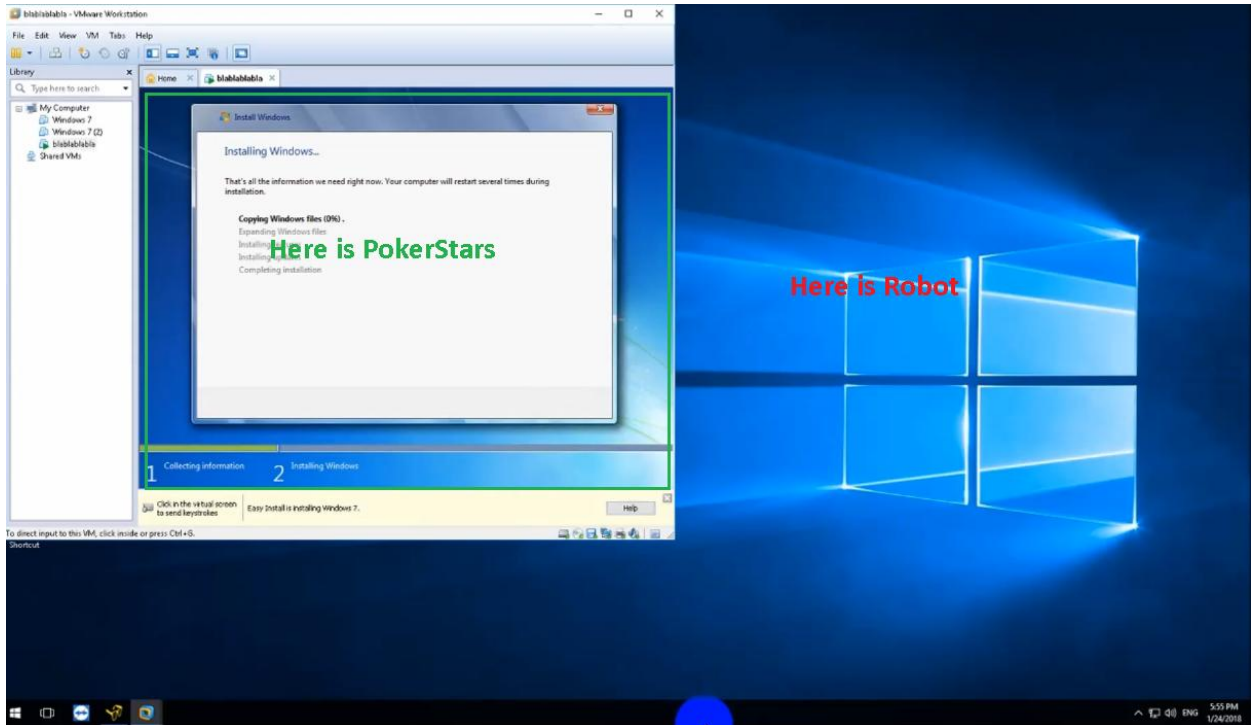

step 1

Setting up the main system

[Video](#)

step 2

On the main computer, install a virtual machine.

The file can be downloaded from [here](#).

### step 3

Installing the system.

The file can be downloaded from [here](#).

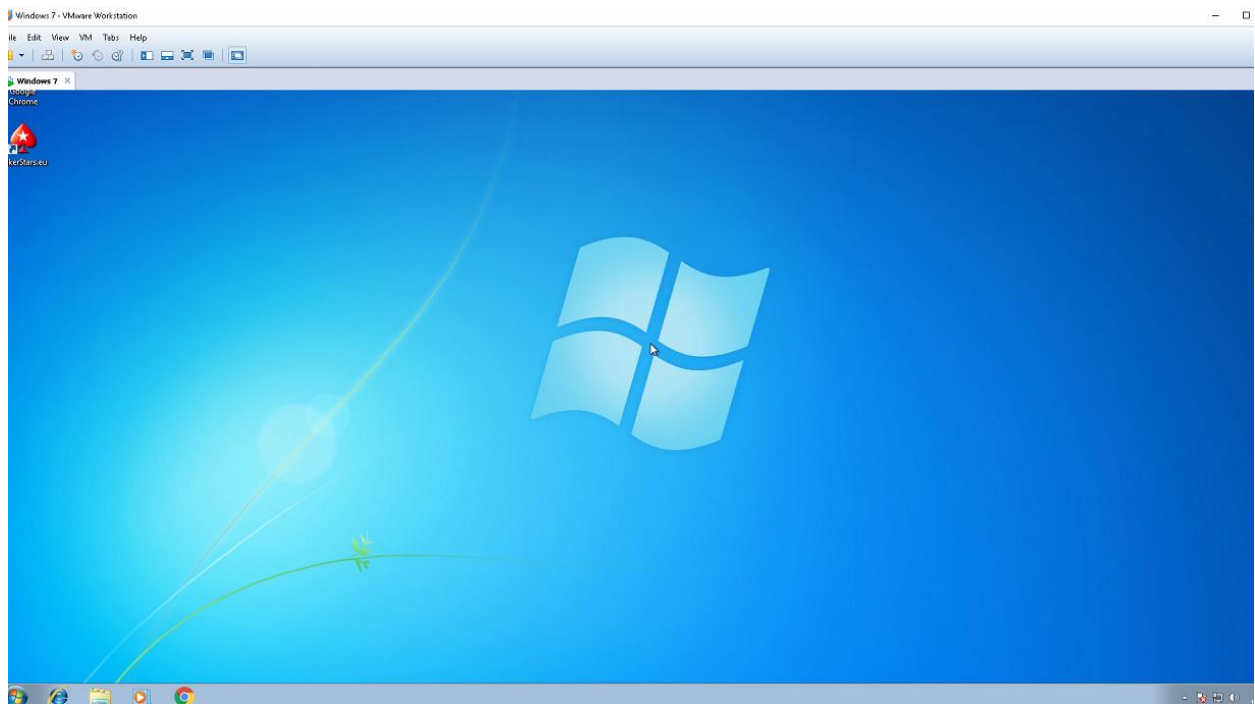

How to install it is possible to look [here](#).

We do everything as on video.

Select the 32 bit Windows system.

In this system we do not change anything.

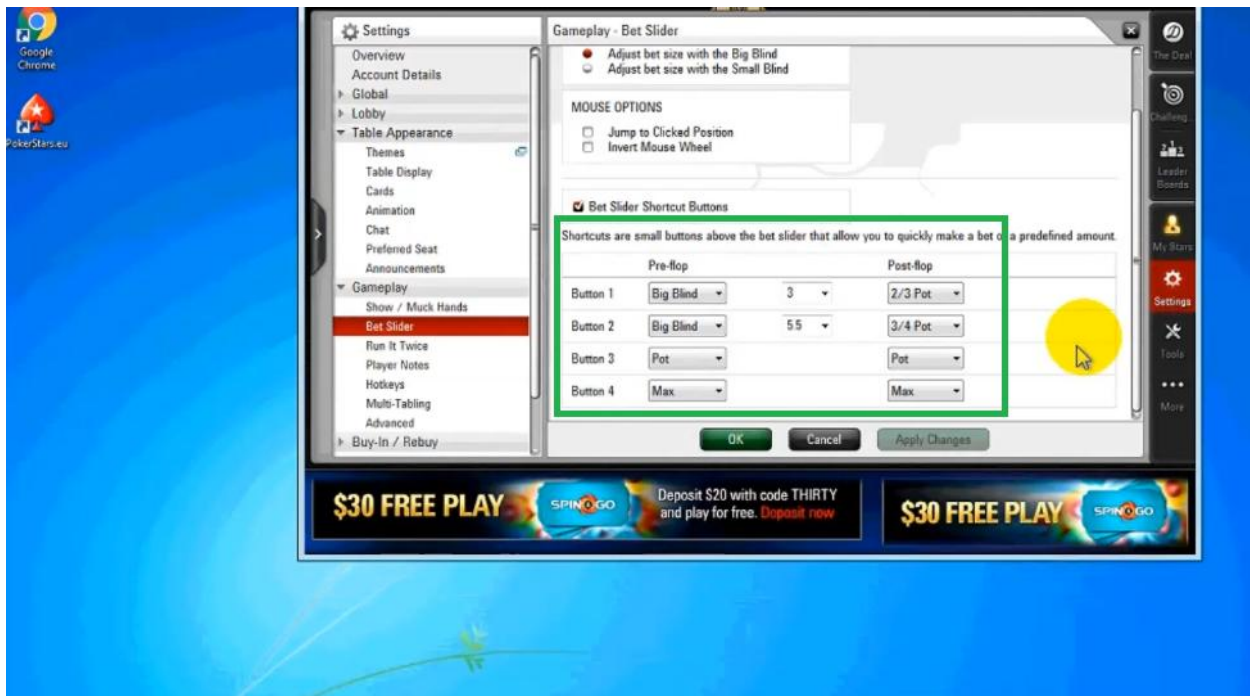

There we install the client of the room pokerstars

step 4

## Settings

Push the button unity

If the button does not work, install the virtual tools

Use the profiles that push the buttons

Everything is welcome a pokerstars !
